

## Technical Specifications for Ductile Iron Pipes and Fittings

We supply ductile iron pipes and fittings from 80mm to 2600mm diameters. Stock items can be delivered next day or we can provide a tailor-made solution for your entire project including sourcing, supply, delivery and after-sales service.

We have a number of exclusive distribution agreements in place and all products conform to DWI standards.

**FT Pipeline Systems Ltd is accredited to ISO 9001, ISO  
14001 and ISO 45001**

VIP HEINKE TYTON-SIT ANCHOR GASKET

The tyton-sit anchor must only be used with a tyton socket profile joint and cannot be used with a Rapid or AJ type socket profile.

## EN 545

Push-in joint is assembled by pushing the spigot through the gasket in the counter socket. It permits significant angular deflection both during and after installation and also can accept a light offset of the centreline.

**Pipes:** Pipes shall conform to BS EN 545:2010; wall thickness shall be class C40 for the sizes DN 80mm to DN 400mm, class C30 for the sizes DN 450mm to DN 600mm and class C25 for the sizes DN 700mm to DN 2000mm. Suitable for push-on (flexible) jointing in standard lengths of 5.5m. Pipes over DN 2000mm will be class K9 unless otherwise specified.

**Internal Lining:** Pipes shall be centrifugally cement mortar lined as per the requirement of BS EN 545:2006 with blast furnace cement conforming to the requirements of BS EN 197. The pipes shall be epoxy seal coated with a DWI approved epoxy.

**External Coating:** DN 80mm to DN 800mm – pipes shall be externally coated with a zinc/aluminium (ZnAl) pseudo alloy of 400gm/m<sup>2</sup> in the ratio of 85:15 with a finishing layer of 70 microns minimum of blue epoxy as per the requirement of BS EN 545:2006.

DN 900mm to DN 2600mm – pipes shall be externally coated with zinc of 200gm/m<sup>2</sup> with a finishing layer of 70 microns minimum of blue epoxy as per the requirement of BS EN 545:2006.

**Rubber gasket:** Sealing rings of EPDM quality conforming to the requirement of BS EN 681-1 type WA, and WRAS approved, will be provided suitable for push-on flexible joints.

**Internal socket ends of pipe and external spigot joint area:** DWI approved epoxy.

## EN 598

**Pipes:** Pipes shall conform to BS EN 598:2010; wall thickness shall be class C40 for the sizes DN 80mm to DN 400mm, class C30 for the sizes DN 450mm to DN 600mm and class C25 for the sizes DN 700mm to DN 2000mm. Suitable for push-on (flexible) jointing in standard lengths of 5.5m.

**S&S Sewerage Pipes:** Pipes shall conform to BS EN 598:2007 + A1:2009, suitable for push-on (flexible) jointing in standard lengths of 5.5m.

**Internal Lining:** Pipes shall be centrifugally cement mortar lined with high alumina cement, as per the requirement of BS EN 598:2007 + A1:2009.

**External Coating:** DN 80mm to DN 800mm – pipes shall be externally coated with a zinc/aluminium (ZnAl) pseudo alloy of 400gm/m<sup>2</sup> in the ratio of 85:15 with a finishing layer of 70 microns minimum of red epoxy as per the requirement of BS EN598:2007 + A1:2009.

DN 900mm to DN 1000mm – pipes shall be externally coated with zinc of 200gm/m<sup>2</sup> with a finishing layer of 70 microns minimum of red epoxy as per the requirement of BS EN 598:2007.

**Rubber gasket:** Sealing rings of EPDM quality conforming to the requirement of BS EN 681-1 type WG will be provided suitable for push-on flexible joints.

Sizes up to 2200mm available upon request.

## FLANGE JOINT SETS

Flange joints are a long-established, non-proprietary means of connecting pipes and fittings, usually in above ground situations. This method is well known and needs very little elaboration other than to advise the sequence for tightening the bolts and the recommended torque settings.

PN16 Bolt Sizes							
Dia (mm)	No. of bolts	Ductile size x length	Ductile/Steel size x length	Steel/Steel size x length	Ductile/PE size x length	Spanner size (mm)	
50	4	M16 x 65	M16 x 70	M16 x 70	M16 x 90	24

1400	36	M45 x 180	M45 x 215	M45 x 260		70	

## FLANGE BOLT TORQUES

The following chart indicates the approximate bolt torque required to seal flanged joints against internal pressure. The torques given are based on using a 3mm thick 70 IRHD rubber gasket.

The torque values are applicable for the type of gasket specified and bolts, nuts and washers should be free from damage, rust, etc.

The relationship between applied torques and the actual load imparted is not precisely predictable, therefore, the values in the table are, of necessity, an approximate guide.

PN16 Flange Joints							
Dia (mm)		To seal at 10 bar		To seal at 16 bar		To seal at 20 bar	To seal at 25 bar
Approximate bolt torque setting Nm

FT Ductile is an authorised stockist of Viking Johnson products in the UK.

**Maxi flange adaptors**

**Large diameter flange adaptors and couplings**

**Restraint flange adaptors & couplings (ductile, steel, PE)  
Flexlock / Ultragrips / Aquafast / Aquagrips**

**Repair clamp fittings**

FT Ductile is the approved distributor for the professional range of pipe cutting power tools from Exact Tools. The pipe cutters are lightweight so can be easily transported for use on-site and are available as either cordless or power operated (220V/110V) machines. The cordless versions have an extended battery life.

All are suitable for cutting ductile iron pipe in diameters from 80mm to 450mm and plastic pipe up to 400mm diameter. Other pipe materials can be cut depending on the type of blade used and the range also includes a pipe saw for cutting and bevelling plastic pipes in one process. A range of discs is available and up to 200 cuts per disc can be achieved.

Advantages of this award-winning, patented technology include:

- Faster than using alternative cutting methods (10 clean pipe cuts can be made in the time it takes for an angle grinder to produce 1 cut).
- The clean and straight finished cut means no extra shaping or rework is required
- Virtually no sparks when cutting metal pipes
- Safe method for workers  
Prevention of injury to workers as the tools are lightweight

## PIPE CUT + BEVEL 170E SYSTEM – EXACT

Cut and bevel cast iron pipe in one process

Pipe OD	15 – 170mm (0.62 – 6.7")
Wall thickness	8mm cast iron, 14mm plastic
Materials cut	Cast iron, plastics
Loading capacity of supports	190 kg (4 supports)
Voltage / Power	230V / 1200W
Voltage / Current	110V, 120V / 9.2A
No-load speed	1600 – 3500 r/min
Blade diameter	140mm
Mounting bore	62mm
Weight	5.7 kg
Range of use OD	15mm – 170mm
Maximum pipe wall	8mm steel, 14mm plastic
Electronical unit	Blade speed preselection, automatic fuse, soft start, torque control

## PROCO CHECK VALVES

ProFlex 710A

ProFlex 710B

ProFlex 730A

ProFlex 730B

Rubber check valves are a cost effective way to control back pressures from sewage treatment plants, outfalls and tidal operations. They are specifically designed to be durable and effective, reducing the likelihood of common maintenance problems. They are a fully passive device requiring neither maintenance nor any sources of outside power or manual assistance to operate.

The Series 700 ProFlex™ check valves are offered as direct replacements for maintenance ridden flap type check valves. Unlike flap type valves, the ProFlex™ valves will handle large obstructions without jamming or having swing gates binding open. They are available in either flanged or sleeve style.

Style 710 – Flanged: Designed to bolt directly to existing flanges or new installations, the ProFlex™ rubber duckbill check valve is a full port, concentric design check valve. Various drilling standards are available on request and they can be installed in either vertical or horizontal applications. The unique advantage to this valve is its very low (25mm-50mm) cracking pressure.

Style 730 – Sleeve: The slip-on rubber duckbill check valve is designed to easily slip over an existing pipe (including oval and rectangular configurations) and is affixed with heavy-duty stainless steel clamps. Can be installed in either a vertical or horizontal application.

Benefits of the Series 700 ProFlex™ rubber check valves include:

- All rubber construction resists abrasive slurries
  - Very quiet operation with no water hammer
  - Unique design prevents backflow
  - Negligible maintenance and energy costs
  - Will not warp or freeze
  - Quick interchange with any flap type check valve
- Available in a wide range of sizes

## STEEL FITTINGS AND CORROSION PROTECTION

FT Pipeline Systems (of which FT Ductile is a trading division) can manufacture steel fittings for your scheme. CAD drawings are provided in consultation with the client and are agreed upon prior to the start of manufacturing. Standard fittings are produced according to BS EN 10224. Alternatively, bespoke fittings can be manufactured to suit specific requirements.

Choice of external coatings:

- Three layer Polyethylene or polypropylene to DIN 30670
- Polyurethane
- Resicoat
- FBE
- Polythene Tape Wrap
- UV Stabilisers top coats

Choice of internal linings for potable water:

- DWI approved cement mortar lining
- DWI approved cement mortar lining with epoxy seal coat
- Resicoat

Internal lining Durathane P or PU high builds for brackish / salt water / extremely aggressive water.

Fabricated fittings are coated and lined to customer requirements, and include but are not limited to:

- Bends 1.5D, 3D, 5D
- Tees
- Crosses
- Level invert tees
- Long-radius bends
- Flanges
- Flanged sockets
- Flanged spigots
- E Joints
- E Joint sockets
- E Joint spigots
- Reducers
- Radial tees

FT Pipeline Systems offers corrosion protection for pipe joints. Canusa heat shrink sleeves are heat activated / PE wraps for corrosion protection of all types of jointing methods. They are quick to install, as there is no need to prime or profile the pipe, making them extremely cost effective. Canusa heat shrink sleeves and wraps are very versatile; they are suitable for use on steel, plastic and ductile iron pipe joints, and are delivered pre-cut to fit the diameter of the pipe, giving no wastage of materials.

## STOP TAP BOX LOCKING REPLACEMENT LIDS

The answer to defective street furniture and section 81 reports. All UK water companies have issues with repairing defective street furniture, many experiencing costly works brought about by Section 81 reports. Every year, water companies pay out hundreds of thousands of pounds in insurance claims alone, resulting from injuries sustained due to broken, missing or vandalised Surface Boxes.

Virtually every UK water company now uses FT's replacement lids which provide a no-dig, 10 minute solution for this daily struggle. The anti-vandal locking lids consist of a cast iron or ductile iron lid which locks into position using an ingenious plastic locking mechanism located beneath the lid.

The replacement locking lids are approved by Cadent Gas for use in the UK gas industry.

## SMART LIDS

2020 saw the introduction of the 'Smart Lid'. In conjunction with Severn Trent Water, FT Pipeline Systems has developed a range of smart lids for the UK water market. The process started with a request from Severn Trent to modify our existing fire hydrant lids in their area to help them resolve an ongoing issue they were experiencing.

Severn Trent have installed around 38,000 leakage loggers across their area. Typically, around 37% of the 10,000 installed in the Birmingham area suffer from intermittent signals. This is because the signal from the logger can't transmit through the standard fire hydrant lid. The solution has been to develop an integrated antenna built into the lid to allow the signal to get through. The new smart lids have been tested extensively during 2020 and all of them have worked properly without any issues.

As a result of this success, we have increased our range of smart lids to include a variety of different shapes and sizes. Markings can also be changed to meet the particular requirements of your area (M / FH / WO).

---

## MANUP KEY

FT's locking replacement stop tap lids, meter boxes, sluice valves and hydrant covers save water companies thousands of pounds each year by not having to replace the entire chamber when a lid is damaged. Only one operative is required to install an FT Pipeline no dig lockable replacement lid on the first visit. However, what happens when you encounter a stubborn cover that has seized up?

Whilst still ensuring safe lifting and manual handling techniques, any stuck lids or covers can now be raised without chiselling or hammering and without damaging the lid or frame. This new tool provides a momentary upward force of 1.5 tonnes! Thanks to the 8kg weight and slide hammer action you are effectively hammering the lid up. It comes with a variety of tips in different sizes to suit just about any application.

---

## DUAL CONTAINED CHEMICAL DOSING HOSE

### Flexible Chemical Dosing Hose – ProtectaFlex

A dual contained pipe-in-pipe, chemical dosing system for the water treatment market. ProtectaFlex uses catch-pots that enable the outer containment to be terminated inside the catch-pot. It is lightweight with a durable PU outer and a WRAS-approved inner hose. The flexible hose can be delivered in continuous runs with no joints up to 500m, meaning you only require one fitting for each end on half a kilometre of pipe, saving thousands on fittings alone compared with a rigid system.

## Flexible Chemical Dosing Hose with Built-in Leak Detection – PF Detect

The next generation of flexible dual contained chemical dosing hose, PF Detect, has built-in leak detection and therefore does away with the need for expensive catch-pots. Environmental risks are also eliminated.

Its light and supple material combined with the fact that it relies on capillary action rather than gravity to work, mean that it can be installed almost anywhere with no need for expensive and disruptive excavation works.

## DUCTILE PIPE RELEVANT STANDARDS

Please note that the recommendations in this catalogue only highlight the important points of the standards. We can offer pipe to all the standards listed; customers need to confirm which standard they require when ordering.

EN 545	Ductile pipe, fittings, accessories and their joints for water
ISO 2531	International standard ductile pipe, fittings, accessories and their joints for water and gas applications
EN 598	Ductile pipe, fittings, accessories and their joints for sewer applications
ISO 7186	Ductile iron products for sewerage applications
BS 3416	Specification for bitumen based coatings for cold application suitable for use in contact with potable water
ISO 8179	Ductile iron pipes : external zinc coating Part 1 : metallic zinc with finishing layer Part 2 : zinc rich paint with finishing layer
BS 2494	Specification for elastomeric seals for joints in pipework and pipelines
ISO 4633	Rubber seals – joint rings for water supply, drainage and sewerage pipelines – specification for materials
BS 6076	Specification for tubular polyethylene film for use as protective sleeving for buried iron pipelines and fittings
ISO 8180	Ductile iron pipes – polyethylene sleeving
ISO 10802	Ductile iron pipelines – hydrostatic testing after installation
ISO 10803	Design method for ductile iron pipes
EN 1092	Flanges and their joints, circular flanges for pipes, valves, fittings and accessories, PN designated Part 2 : cast iron flanges
EN 1514	Flanges and their joints, dimensions of gaskets for PN-designated flanges Part 1 : non-metallic flat gaskets with or without inserts Part 2 : spiral bound gaskets for use with steel flanges Part 3 : non-metallic PTFE envelope gaskets Part 4 : corrugated, flat or grooved metallic and filled metallic gaskets for use with steel flanges
ISO 7005	Metallic flanges – cast iron flanges
AWWA C151	Ductile iron pipe, centrifugally cast, for water
AWWA C600	Installation of ductile iron water mains and their appurtenances
ISO 9001	Quality management systems
